

Dynamics Atlas: a scientific answer comes first

A real HSP90 result is now auditable.

Rule benefit remains an open research question.

Next: native-observable interpretation and a second system.

The goal: connect evidence to a bounded answer

Different measurements reveal different properties.
Rules preserve conditions; tools produce evidence.
Agents choose analyses and explain what follows.

Two meetings kept the project grounded

July 28: extract science from existing HSP90 data.

August 24: show a minimum prototype using mature methods.

Experts need a concrete result to critique.

The path: data → rules → agent answers

July: HSP90 acquisition and analysis.

August: source-grounded rules and routing prototype.

September: Q05 / T4L development, then four HSP90 answers.

HSP90: what changes after a closed-lid start?

20 closed-seeded and 20 open-seeded trajectories.
1,001 saved points each, spanning 20–1020 ns.
Directional labels combine geometry and NOE preference.

Half show open direction, through two different histories

At the five-point threshold, closed starts split:
5 first qualify as open; 5 go closed → open; 10 stay closed.
Open starts: all 20 remain directionally open.

A correct answer must keep definitions separate

ES15 has 906 open-direction points from 115 ns.
At 50 points, its first qualifying direction is already open.
Strict core labels cover only 3 of 40,040 saved points.

Three answers recover counts; rule value is not established

A1, B1 and B2 recover the main counts; A2 mixes thresholds.

B2 adds a useful 10/20 observation.

Both B answers import RMP terms without established applicability.

The bottleneck: turn work into usable delivery

Reuse verified analysis instead of repeating it.

Every track ends with an answer, evidence and meeting material.

Preserve originals; preregister comparisons; no live answer hints.

New evidence narrows interpretation; one runtime remains blocked

NOE at 1 A: 9 of 10 closed-start open-direction traces remain mostly far from both references.

Rules: scope rendering fixed; behavioral effect untested.

Second system: candidates found; credentials and admission pending.
