

Which assistance actually improves scientific answers?

Keep questions, a short protocol, mature methods and traceable evidence at the centre.

Explicit subquestions improved coverage in both cases.

Method cards and one-round feedback missed their continuation criteria.

A warning file did not deliver its information to the Agent.

The comparison starts from prepared data

Four interventions

Admission-card availability

One round of checker feedback

Retrieved method guidance

Explicit subquestions

Same model and tools

Luna · medium reasoning

4 fresh runs per condition

74 completed outputs

\$1.2029 settled cost

The project moved from rule coverage to scientific tests

33 candidate rules

Document assumptions and limits

**Q05 and the research
reset**

Separate developer workflow from Agent ability

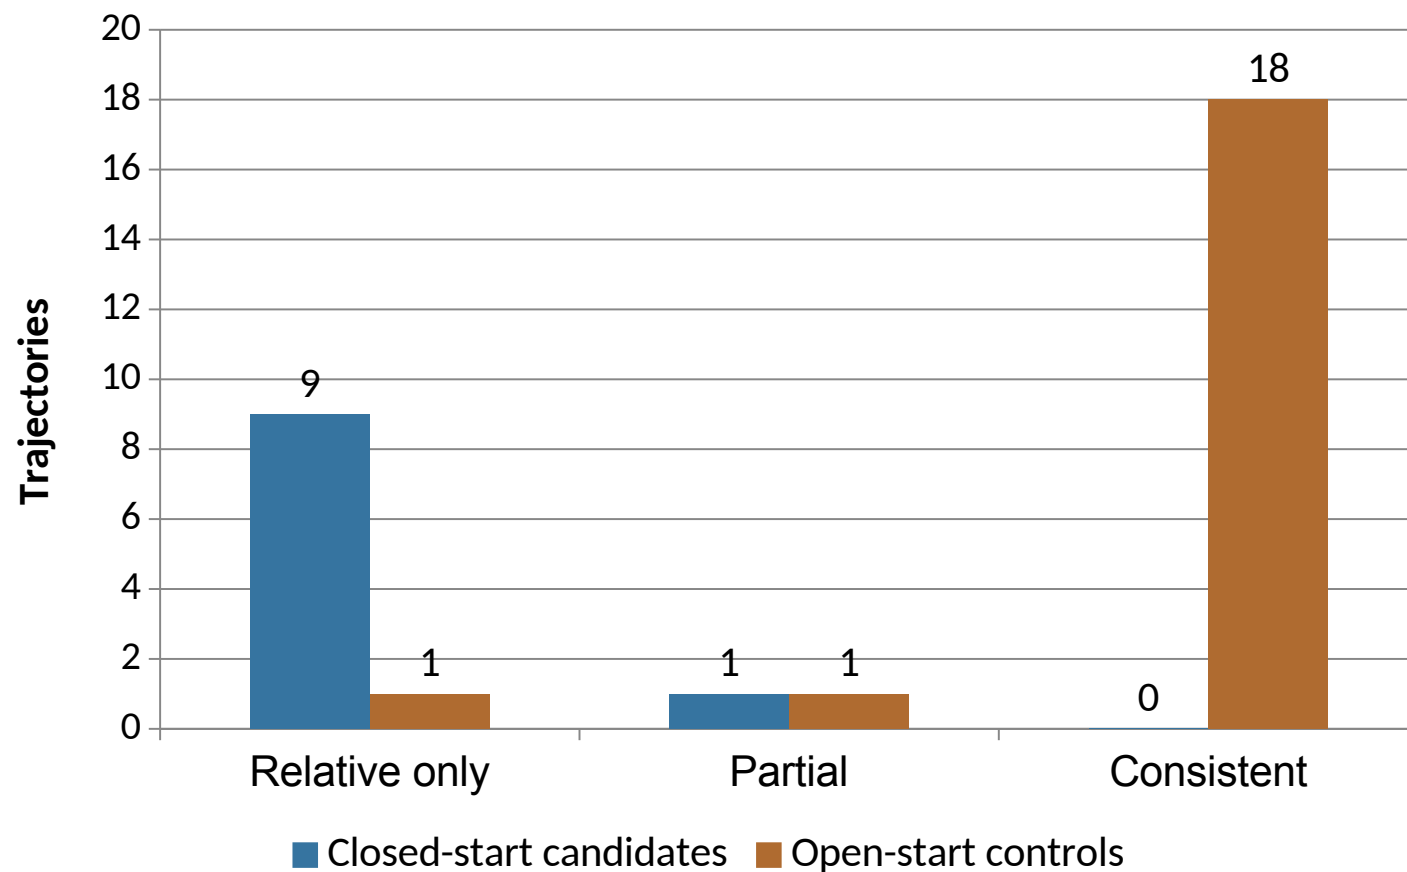

HSP90, DHFR and ADK

Compute results and expose representation errors

Four-layer pilot

Decide which components merit further investment

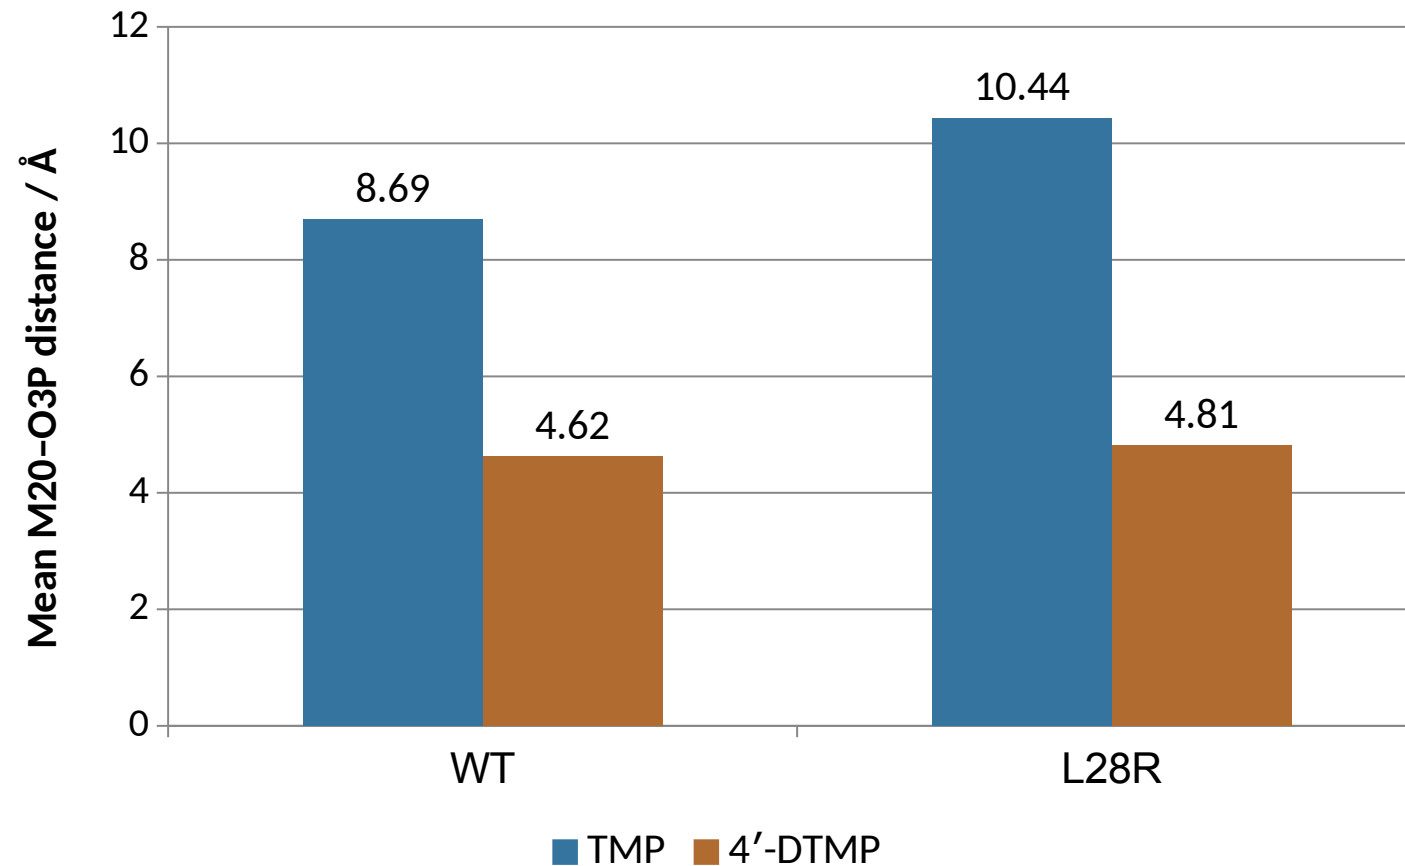

HSP90: open direction is not open-reference agreement

10 = 5 initially
+ 5 later

Direction and absolute
reference agreement
answer different
questions.

DHFR: corrected local distances show a proximity change

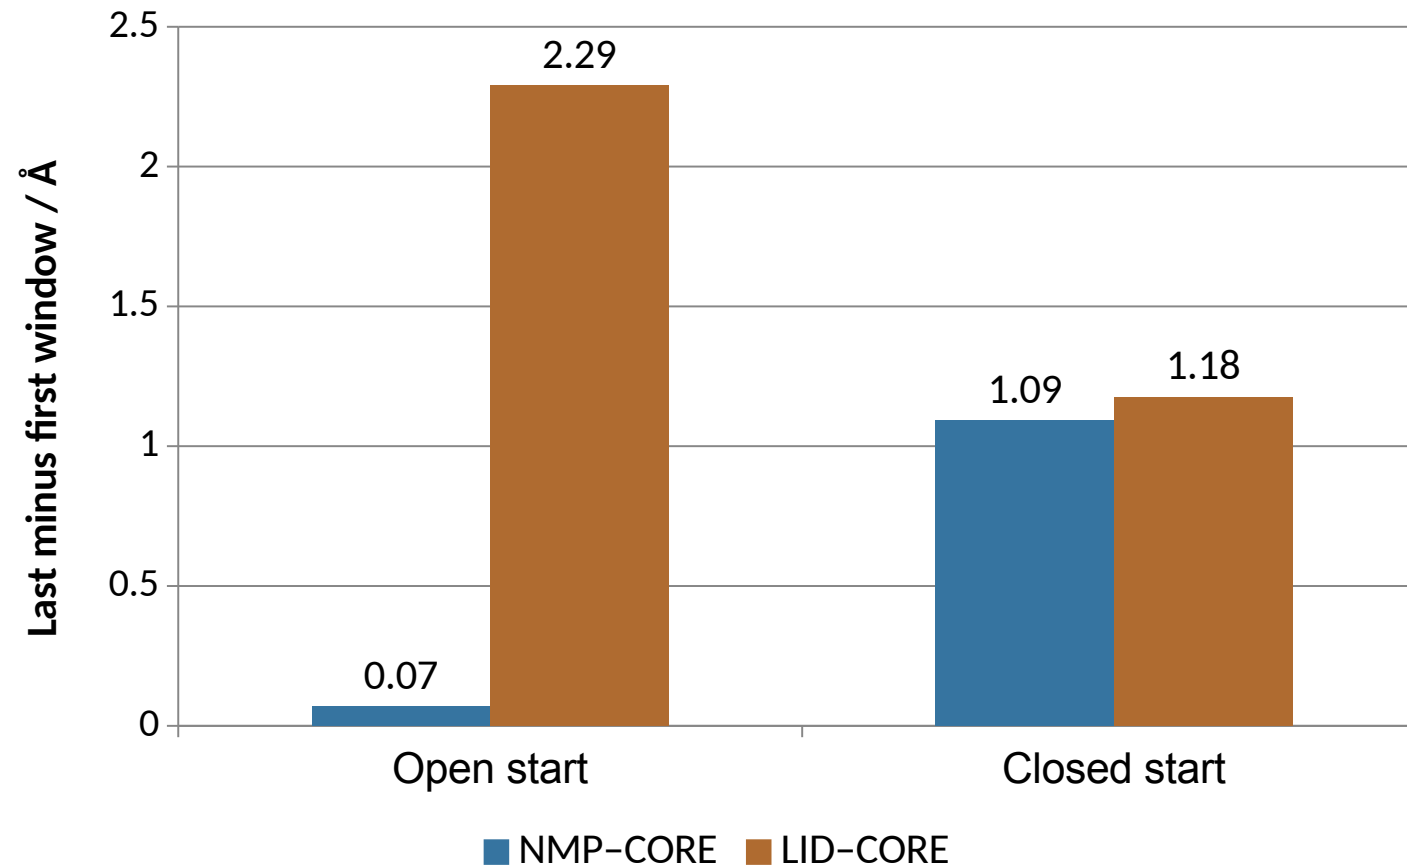

Closer in both variants

One trajectory per condition

Original Agents missed the defective input.

ADK: no joint closure in the endpoint-window comparison

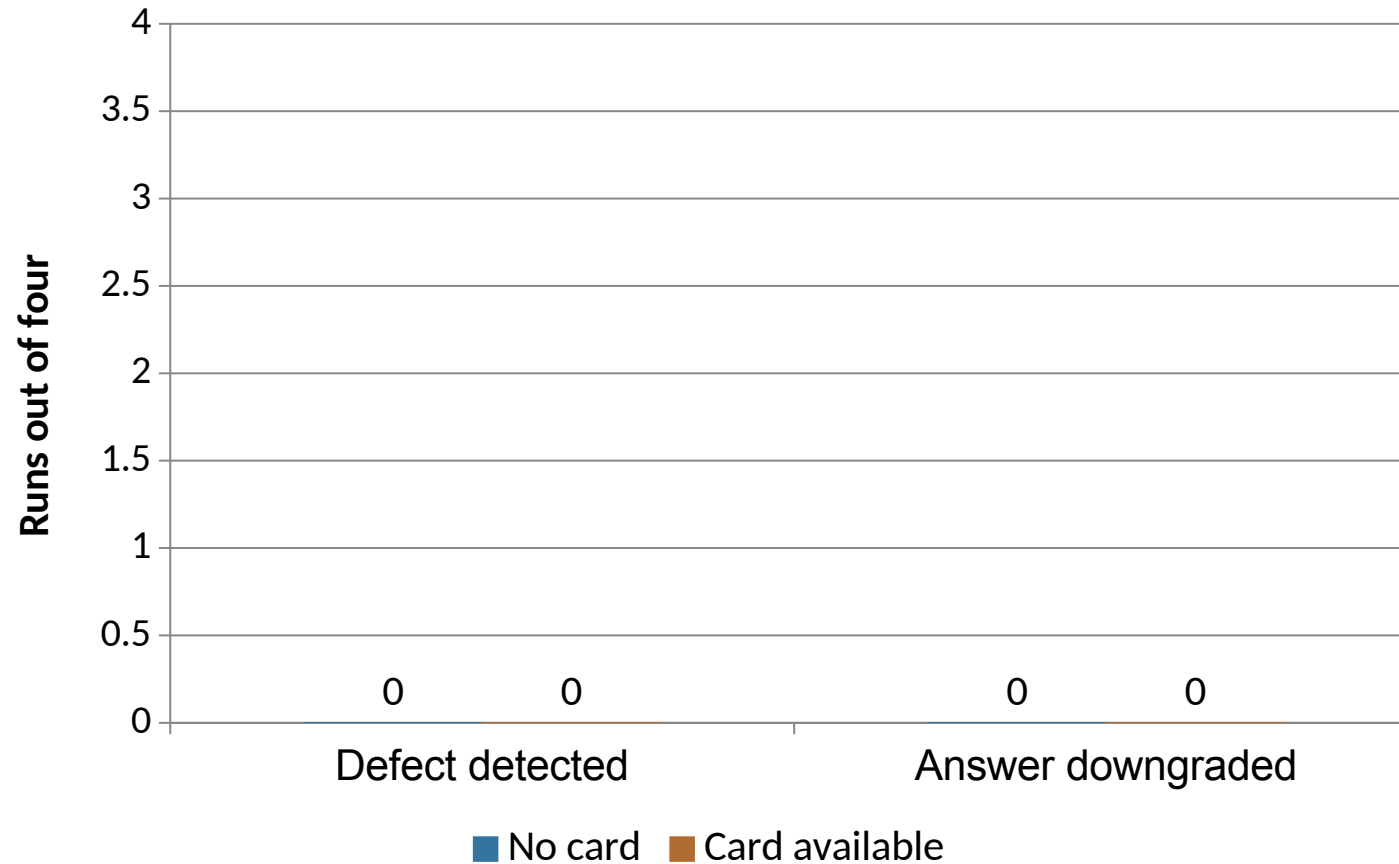

All four changes positive

Distributions overlap

Large intramolecular
distances can be valid
beyond half a box length.

Admission-card availability did not deliver the warning

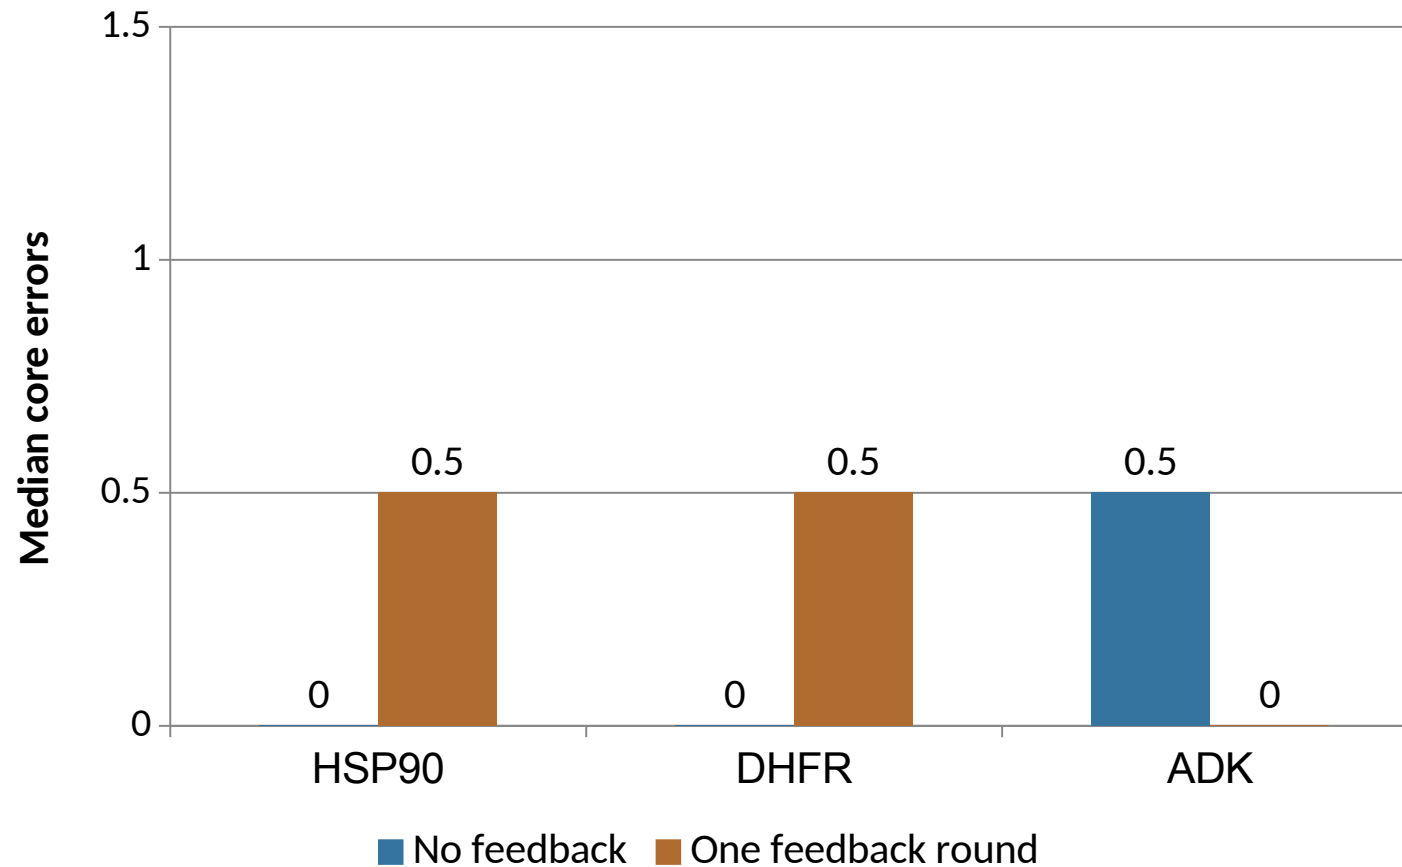

4/4 listed the card

0/4 read its contents

Enforce physical
admission

during data preparation.

One feedback round did not establish useful correction

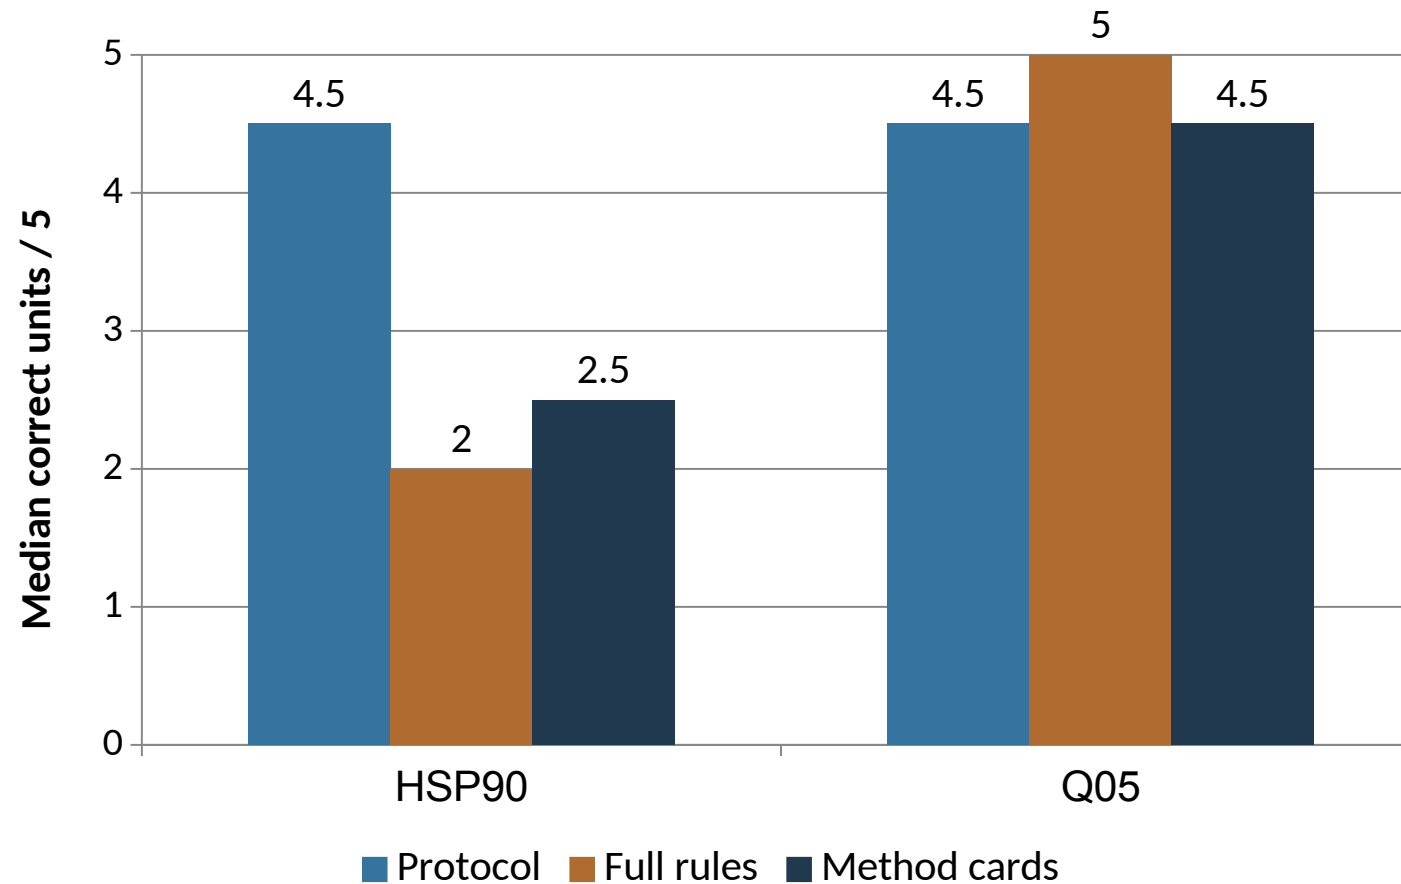

1/3 met group criterion

Required: at least 2/3

Three revisions lost
answerable content.

Method-family retrieval did not ensure applicability

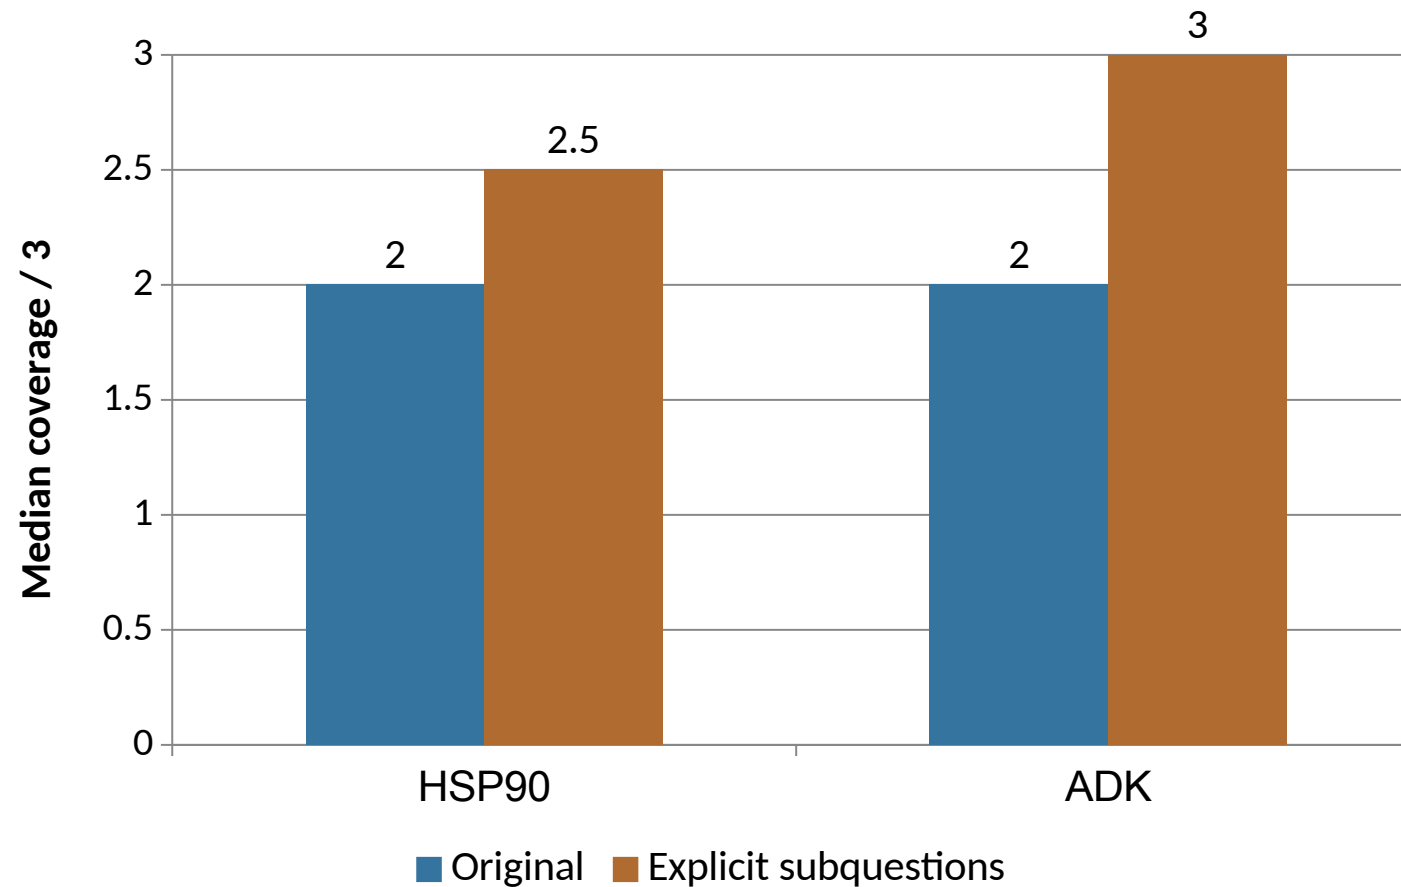

Mixed across cases

Keep the Q05 benefit
in the interpretation.

Retrieval is not
applicability.

Explicit subquestions increased supported coverage

2/2 met coverage
criterion

More complete answers
are not uniformly
more accurate answers.

The main result is traceable, but the pilot is small

Preserved: frozen inputs, raw answers, tools, costs and sealed scores

Four runs per question and condition; one new source group

Scorer also curated cases; independent domain review remains open

Human correction time was not measured

Scientific calculations and Agent contributions are reported separately

Keep the scientific workflow; simplify the architecture

No stable Rules increment was established in this pilot.

Keep explicit questions, the short protocol and mature tools.

Put physical admission upstream of analysis.

Pause selector and generic checker expansion.

Test any revised component on new questions.
